Why do you need Private Medical Insurance?

Recent figures show that one person in eight who is admitted to hospital for a non-emergency procedure could wait more than a year between being referred by a GP and being treated. Department of Health findings show that the annual number of people waiting 52 weeks for general surgery could reach 491,000.

Long delays for a hospital bed could have damning effects on yours and your family's lives. Later surgery dates leads to a longer recovery which means a longer time waiting to get back in the swing of normal working and family life.

Even simple tasks like having a regular check-up at the **Dentist** or **Opticians**, seeing a **Physiotherapist** or having **Alternative Treatments** are all more expensive than you think.

PMI Partners can find you a range of Health Cash Plans to help meet the cost of everyday healthcare needs as well as full Private Cover for more serious, longer term problems.
